

v minec and custom surface support.

Just one step of gen is not enough.

Collided or not (giant impact hypothesis).

World divided by tectonic plates, getting postf in v.

Divided by areas of rocks (orogen, shield, yield etc)

World layers

1. Regolith (soil)

2-∞. Bedrock layers

Bedrock parts

1. Country rock - silicates, carbonates, aluminates (?) etc - compounds of most abundant elements.

2. Igneous intrusives, valuable rocks on country rocks.

---

3. Void (instead mantle - too small height)
