

i Why I was disappointed with InnerCore?

- (a) Bad, old and "legacy" InnerCore API.
- (b) Better world structure on Minetest - cubic "blocks" and "chunks" and bigger height.
- (c) Proprietary.
- (d) Almost abandoned

ii How similar is it to GregTech?

Pretty similar, but much things has been changed for realism, flexibility and ideas inspired by some software.

iii Why I refused to port GregTech?

Unique mods for InnerCore rare and not usable.
